

Meet Mother Nature's next best nutrition: donor milk

For medically fragile infants, premature babies, newborns in mother-baby units, and outpatients, mother's milk is best. When mother's own milk is unavailable, donor milk is proven to improve outcomes and increase rates of breastfeeding success.

midatlanticmilkbank.org

Pasteurized donor milk is life-saving medicine.

Research shows that the use of donor milk for medically necessary supplementation:

- ▶ Provides critical nutrition while supporting baby's immune system and promoting healthy gut bacteria.
- ▶ Decreases rates of serious complications for premature and at-risk babies in NICUs.
- ▶ Decreases length of stay in the NICU.
- ▶ Can serve as a bridge to mom's breastfeeding success. In fact, moms of babies receiving donor milk sometimes become donors themselves.

Welcome to Mid-Atlantic Mothers' Milk Bank

Throughout the region, hospitals, physicians, and families rely on the leader, Mid-Atlantic Mothers' Milk Bank, which is accredited by – and strictly adheres to the guidelines of – the Human Milk Banking Association of North America.

State-of-the-art safe

Milk donors are healthy volunteers whose screening includes bloodwork. The milk itself undergoes bacterial culturing, drug testing, and nutritional analysis. Milk is also pasteurized to deactivate bacteria and viruses, while retaining important bioactive components.
